the surface of the moon? I can not understand it! "Why is the theory is still so popular?" While kaysing claims have been solidly credited, their ideas are still cited by the theorists of the moon landing conspiracy. There is no air. The fact that you are Two images clearly show the same area, despite being taken from And for different countries, it is a convincing evidence of the lunar landings. Make traces of astronauts visible at the surface thanks of the moon to the moon recognition orbiter of the moon, we can actually see photos of satizer of the Apollo landing sites. Apollo Luna Buggy was used again during the Apollo 16 and 17 missions. (Selfie Sticks Weren is not one thing at that time). What happens with those of the lunar module as it came out of the surface of the moon? The Apollo missions were scheduled so that the astronauts will reach the surface at the lunar dawn or at sunset, when the temperatures are much lower. Because there is no water on the moon, there is no way for your traces should be visible. The region in the sea of tranquility (where the landing occurred) has been ground in very fine particles. More than 800 pounds of rock rocks have been returned to Earth from Apollo's missions. Photo courtesy: NASA Photos are classified by roll of film, allowing the viewer to experience Apollo's missions through the eyes of the astronauts that were there. The cortex of the moon is made of a material called Regolith. The objectives of the lunar probe went to "obtain scientific data from lunar origin and evolution and develop technology for future lunar exploration." Selene took pictures of the topography of the moon and sewn them to create a 3-D field visualization. Kaysing stated that during her time with Rocketdyne, she had access to documents that discredited the possibility of a manned mission to the moon. With the next 50th anniversary of the Apollo 11 mission, now it is a good time to learn more about the NASA Apollo program, and the hard work and the determination that culminated in one of the greatest achievements of history. More from ask.com kaysing also asks the fact that the jets of the lunar module did not create a visible crater when landing on the surface of the moon. Photo courtesy: NASA dangerous radiation and micrometeoroids to non-coincident fingerprints and false rocks, we review the evidence used to support these conspiracy theories. The radiation of the common argument of the Used to support your position has to do, with Van Allen Radiation Belts. What part of the fact that Apollo's missions were tracked in real time by several organizations and individuals, many of whom were not affiliated with NASA? While many people believe that landings were put on stage, there is much more evidence to corroborate the landing of the moon than to dispute it. The former Astronaut of the USA UU Scott Kelly also approached Curry with a Tweet saying: "Steph, so much respect for you, but re the Moon's thing, let's talk. Photo courtesy: NASA, so, Why is the theory so persistent? "Growing, in fact? While exploring a mountain near a landing site called Hadley Delta, the Rover was tested on earrings pronounced with loose sediments. Should contact Arkadium, the provider of these gamessenjoy the best free game of the online bridge! It adapts to a computer collector against opponents to test your skills in this great version of the classical card game. Armstrong and Aldrin left more than 100 articles on the Moon when they left, including the tools and a commemorative plaque that read, "We came in peace for all humanity", Photo courtesy: NASA in fact, debris left from astronauts. It is still visible. Curry asked all for the first time, "Have you ever been to the moon?" Before saying: À é à, ~ à "The fact will come to come and look for us. Photo courtesy: NASA The answers to these questions are simple. Photo courtesy: NASA in the photo above, the shadows of the leg of the astronaut and the Lander of the Moon are emitted in the same direction. However, there is another shadow projected by the lander of the moon that extends to the astronaut. Photo courtesy: Istock Apollo 16 was sighted independently by researchers at the Jewett Observatory of Washington State University. Photo courtesy: Surprise NASA: Lunar Rover was specifically designed to be transported to the Moon. They say that Kubrick spent 16 months filming a false moon that landed after meeting with NASA officials in 1968. At that temperature, the film in his He would have melted immediately. Photo courtesy: NASA In this satellite image of the Lunar Recognition orbiter (the Apollo 14 landing site), the traces of astronauts Alan Shepard and Edgar Mitchell are clearly visible. Although people who believe that the landing of the Moon was organized often claim that they have a broad evidence to prove it, the truth is that the great majority of this evidence has been discredited. The same principle applies to the photos taken from the International Space Station, which often have a starless sky. The irregular shadows of the Surfacency Moon Land Landing Hoax Conspiracy Theorests have signed strange shadows in the photos as evidence that the scene was chosen. The deception of the landing of the Moon, the conspiracists argue that the stroller of the moon was too bulky to be transports. He affirms that the F1 motors used to feed the Saturn V rocket were not reliable. Despite the evidence stacked against them, it seems that the Conspirations of Landing Hoga of the Moon are here to stay. Photo courtesy: NASA NASA spokesman James Hartsfield has responded to this affirmation in the past, saying: "In some photos, astronauts are illuminated from above because sunlight is reflected on the lunar surface or outside the landing vehicle, à, ~ is that a support? A lot has been made by the theoretic of the conspiracy on a rock that seems to be tagged with the letter C. The photo of the lunar module that comes out From the moon it was taken by one of the many remote cameras that remained on the moon. The book was chosen and reissued later in 2002 by health research books. Kaysing arguments in the book, kaysing aims to the absence of stars in photographs taken during the moon landing as evidence that the photographs were in Moon. On the 40th anniversary of the historical event, WHOOP! Goldberg asked his co-hosts the "View", "Why is the flag that waves? In addition, her spacecraft was highly isolated against radiation. RADIATION Flojateriega The popular piece of evidence has to do with the American flag that Armstrong and Aldrin ", planted on the Moon. Once eliminated from a small compartment of the lunar module, the buggy of the moon was designed to develop and assemble it Almost almost no required help from the astronauts. Why is not there a crater under the lunar module? Many theorists of the crespect of the landing moon assume that it should be a crater under the lunar module, a Product of the force exerted by the propellers, since they lowered the module to the surface. The Buggy Moon developed incredibly developed in a short 17 months. The scientific team is stored on the moon when the astronauts left the surface of the moon, they did not take everything with them. I'm sorry, I do not want to start conspiracies. Photo courtesy: Keith Allison / Flickr curry later he apologized for his comments after being invited by NASA PA He ran to visit the Lunar Laboratory at the Johnson Space Center in Houston. In addition, the lunar rocks taken to the land of the Apollo missions have been tested against the lunar material that led home by the Soviet Union After the Apollo 11 mission, the United States endowed 135 countries with moon rock pieces as a goodwill offering. Photo courtesy: The Although it is often aimed as the entire event was filmed in a set, the real explanation is much more simple. The Apollo 11 mission was tracked by the Banco Jodrell Observatory in the United Kingdom, as well as by Larry Baysinger, a radio operator in However, there are many who are scattered that the landing of the moon has passed. Photo courtesy: IStock Your main argument, however, focuses around the engines used in the Space Ships of the Apollo Missions. In fact, the conspiracy has only grown in popularity since the 1970s. Because the landing took place during a lunar dawn, a large amount of sunlight was reflecting off the surface of the moon. Who took the photos of Armstrong and Aldrin together on the moon? Would not it be impossible for a spacecraft to travel a significant distance through space without being hit by one of these mortal spatial dust pieces? The theorists of the conspiracy affirm that there is no way that Aldrin and Armstrong could have moved along the surface of the moon in this heat, let alone take photographs. If the light comes from a source (the sun), should not all the shadows fall into the same angle? And, in any case, I do not think everyone tell me, that's safe. "Questions by Steph Curry The Moon Landingsin 2018, Steph Curry appeared on a podcast hosted by the Players of the NBA, Vince Carter and Kent Bazemore, where He expressed skepticism on the Lunar Landing, thank you very much for your cooperation. In production of films, accessories are often labeled with letters or numbers that correspond to where the tip should be placed inside the scene. This treasure of images was published in 2016, allowing viewers to see images of the mission of Apollo in high definition for the first time. The Missions of Apollo were tracked around the proof of more information. But ... How big can a vehicle fit in the lunar module? Surely the propellers were sufficiently enough powerful to exploit the sediment of the surface of the moon out of the way as they approached, right? In addition, many theorists have been in sites such as YouTube, Facebook and Reddit to popularize their views. Whoopi Goldberg and Marion Cotillard have doubts about doubts, such as Whoopi Goldberg and Marion Cotillard. Cotillard Doubts expressed that the landing of the moon really happened. Photo courtesy: NASA In 1976, Kaysing Auto-published A book entitled À é à, ~ À "We never went to the Moon: the thirty billion scam of America's dollars. "In it, KAYSING affirms that all NASA's missions on the Moon between 1969 and 1970 was actually organized. The evidence that citan is unstable in the best: irregular shadows, the absence of stars in the photos taken on the moon, a lunar rock that looks like a support and the traces that should not be possible. Photo courtesy: Wikimedia Commons In 2016, Kubrick's daughter launched a statement that firmly denies these claims, saying: "There are many, very real conspiracies that have happened Throughout our history, "but states that the lunar landings were faked. And filmed by my father? Neil Armstrong and Buzz Aldrin spent more than 21 hours on the moon who collect lunar samples, installing equipment, taking pictures and erecting a US flag. Most historians agree that Apollo 11 Luna landing was one of the greatest achievements of civilization. Photo courtesy: NASA still has doubts so the landing of the moon? The theorists of the conspiracy sign that because there is no atmosphere on the moon, the flag will not be able to influence or move in the wind, as it seems to do it in the photos. These belts surround our land with a layer of radiation. The photo of Armstrong and Aldrin together were taken by the lamber of the lunar module. Impossible foot, the theorists of the faculty conspiracy, believe that it would have been impossible for astronauts to leave the traces on the surface of the moon. If there is no atmosphere on the Moon to block the view, should not the stars be more brilliant than they look like Earth? Photo courtesy: NASA This argument is actually scientifically incorrect. Photo NASA The Apollo Mission 15 was the first time the Lunar Rover was used. Photo courtesy: NASA The answer to this question may surprise you. Photo photo: We thought that he would also like us to use cookies for the monitoring and advertising of Analytics of our partners. Who took the photos of Armstrong, going down the steps of the lunar module? To continue enjoying our site, we ask you to confirm the identity of him as human. Throughout the years, the figure of this photo has been poorly identified as Armstrong. Photo courtesy: NASA There are multiple ways to authenticate that we have really been on the Moon, including the photographic tests, the traces of the astronauts and the rocks of the moon. In the image below this paragraph of the Apollo 15 landing site, the Lunar Rover tracks are clearly visible to the right of the descent stage. With a close observation, the scheme of the metal piece can be seen in photos from the moon landing. Why are there no stars? Another point of content has to do with the fact that there are no stars visible in the pictures of the moon landing. While the traces are clearly visible in the photos of the landing, a popular argument among the deceit theoretic is that moisture is needed to produce a footprint. For a person to be affected by exposure to radiation, the level of radiation must have been between 200 and 1000 RADs. This made it impossible for the chamber to capture the relatively weak light of the stars. According to kaysing, NASA hid the problem by secretly installing several lower power engines on Saturn V rockets instead. The Kubrick connection of the most extravagant beliefs maintained by the conspiracy of the joke of the Moon, the theorists have to do with Director Stanley Kubrick (of all people.). By 1970, NASA would send five most and 10 astronauts manned missions to the Moon's surface. Dm me "The evidence of a Landing de Luna Stepage How do evidence stink? The Washington Post argues that conspiracy theories have always been popular among those who have the desire to feel more "in what is known" than others and who want to understand the secret functioning of The image of Armstrong on the steps of the lunar module is actually a photo of Aldrin, taken by Armstrong. Maybe he thinks that the presented evidence is convincing, and the considerations seem flutter. Because these images reproduced in the Década of 1970, before digital technology was available, it is likely that the form was caused by a speck of dust or hair trapped in the copier when the image was reproduced. The film should have sunlight Friedin, the surface of the Moon can reach temperatures of up to 280 degrees Fahrenheit. In addition, the film was always stored in a protective container and never exposed to sunlight. But what did he take the photos? The theorists of the conspiracy have argued that there is no way that not all the photos of the moon landing could have been taken by Aldrin and Armstrong. Photo courtesy: NASA The problem with this assumption is that in other photos of the same mission (and in the original image), the letter C is absent. How is that possible? Space.com reports: "The possibility that any cubic yard of space having a micromethor that passes through it is incredibly close to zero", however, spatial shutters are protected from these particles Flying by a device called "Whipple shielding" and spatial suits are lined with Kevlar to protect against micro particles. The buggy of the moon was too large with the Apollo 15 mission, the astronauts could travel around the surface of the moon using a lunar rover, called a "stroller". The astronaut Jim Irwin and Dave Scott used the moon buggy to pick up geological samples, driving more than 17.5 miles through the surface of the moon. In the photo above you can see several articles left by Apollo astronauts 17. Samples have been tested Let's take a look at some of the difficult evidence that the lunar landings made, in fact, occurred. Running images from the Apollo 15 2008 landing site, Japan Japanese Aerospace Exploration Agency He launched a lunar probe called Selene as part of his Kaguya mission. Photo courtesy: NASA almost 50 years ago, July 20, 1969, the spacecraft Apollo 11 landed safely at astronauts on the surface of the moon for the first time. Shepard and Mitchell took two Moonwalks during his visit. The theorists affirm that it would be impossible for astronauts to pass through Van Allen's belts without being hit by a lethal amount of radiation. Radiation.
